

Secure Access Service Edge (SASE)

Amplify network performance and security

SASE is a cloud-native platform that integrates networking and security services into a unified solution. It provides users with secure access to applications and data, regardless of location or device. SASE is a solution tailored to provide seamless connectivity, consistent security, and enhanced user experience across your organization, regardless of geographical location.

Secur-Serv® SASE Solution

Keep your network secure while empowering your hybrid workforce to remain connected and productive, whether they're in the office, working remotely, or on the go.

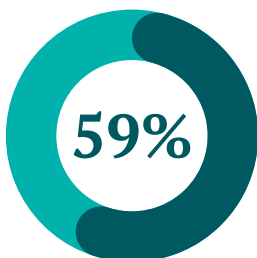

Optimize routing, prioritize critical applications and leverage edge computing to minimize latency, reducing congestion, and improving overall performance for users.

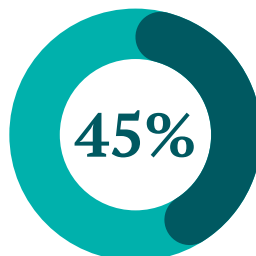

Cut costs and complexity by ditching multiple security products. Our unified security cloud, with zero trust connectivity, mitigates risks from outdated architectures.

Secure the future of your business with Secur-Serv's SASE solution

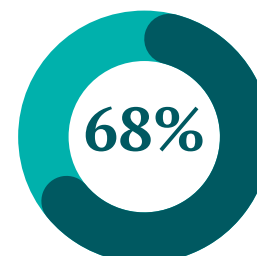

By 2027, the majority of CIOs will prioritize secure work from anywhere (remote, branch, or headquarters), elevating it from a secondary security concern to a primary business priority.

Business owners reporting SASE has benefited their remote work connectivity

IT leaders switching to SASE to save money

Remote users connecting from multiple locations representing the source of network security compromise and attacks

Overcome Business Challenges with SASE

SASE provides multi-layered next generation security, comprehensive network capabilities, on easy to scale cloud technology.

Secure SD WAN

Optimized cloud access

Harness the power of the cloud to build a modern, high performance WAN while boosting reliability and reducing costs.

Next Gen Security

Cloud delivered network security

An easy to manage cloud service model, Firewall-as-a-Service allows you to protect your users, data, and applications without compromise.

Zero Trust

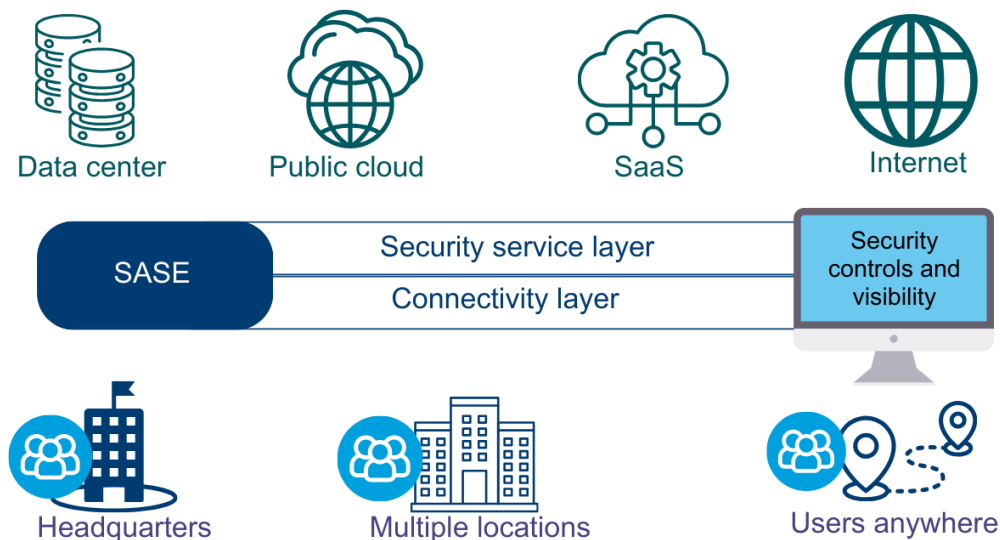

Access for remote users

Secure remote access for employees and partners from anywhere. Never trust, always verify, privileged access.

We have the freedom to focus on our business without worrying about troubleshooting frustrating and time consuming IT issues. – Lumber Company, NY

How does it work?

SASE is a solution tailored to provide seamless connectivity, consistent security, and enhanced user experience across your organization, regardless of geographical location. With networking services like Software-Defined Wide Area Networking (SD-WAN) and SaaS Acceleration and security features such as Next-Gen Firewall (NGFW) and Secure Web Gateway (SWG), SASE offers reliable connectivity and protection whether working from the office or remotely, SASE provides a user-centric, secure access experience.
