

# Your Network. Defended.

Fortinet FortiGate delivers firewall protection sized and priced for growing businesses — managed by Secur-Serv security experts.

Mid-size businesses are now the #1 target for ransomware, phishing, and network intrusion. Attackers know you have valuable data, and they assume your defenses haven't kept pace.

## Why Secur-Serv + Fortinet

- 1 Right-sized for your business:** matching you to the model that fits your traffic volume, users and budget.
- 2 Ongoing management & monitoring:** your rules stay current and alerts get acted on.
- 3 One partner, a unified defense:** Fortinet integrates across your security stack, and Secur-Serv unifies firewall, endpoint, email, and identity protection.
- 4 Expert deployment & configuration:** our engineers handle setup, tuning and validation.

## Next-Gen Firewall Security

FortiGate, a next-generation firewall, blocks threats, monitors traffic, and controls access across your network. Unlike basic routers, FortiGate is built for security with dedicated hardware and continuously updated threat intelligence from Fortinet's global network of sensors.

- **Deep packet inspection** – sees inside encrypted traffic
- **Intrusion prevention (IPS)** – blocks attacks in real time
- **Application control** – restrict risky or unauthorized apps
- **Web filtering** – block malicious sites before they load
- **Secure VPN** – encrypted remote access for your team

## What this means for you

### Stop Ransomware Before it Starts –

FortiGate detects and blocks ransomware activity early, helping stop it before it executes or spreads across your network.

### Protect Remote & Hybrid Workers –

Built-in VPN keeps your team securely connected from anywhere without opening unnecessary risk to your network.

### Simplify Compliance Efforts –

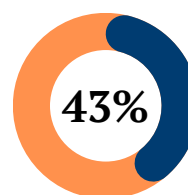

Logging, traffic reports, and policy controls help your business document activity, enforce security policies, and support HIPAA, PCI DSS, SOC 2, and other data security requirements.

### Visibility That Exposes Risks –

Know which apps, users, and devices are active across your network to spot risks and reduce blind spots.

**287** days average time to detect and contain a breach

of cyberattacks target small and mid-size businesses
