AI Foundtions

Tackle the Technical Groundwork Behind AI

Strengthen What Makes AI Possible

AI Foundations is a project-based service that strengthens the technology, security and data controls supporting your business's AI initiatives.

Secur-Serv works alongside your IT team to identify and resolve security gaps, configure systems and AI applications, strengthen access controls and validate improvements through technical testing.

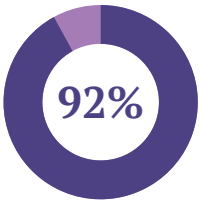

Business Impact of Overlooked Risks

AI can aplify existing weaknesses across your technology enviornment.

Sensitive Data Exposure — Excessive permissions and uncontrolled sharing can put confidential business information in the wrong hands.

Unapproved AI Access — AI agents and connected applications can introduce new security risks without appropriate oversight and controls.

Business Disruption — Misconfigured systems and inadequate safeguards can increase the liklihood and impact of security incidents.

of organizations that experienced an AI-related breach lacked proper AI access controls.
